Remote Emergency Shutdown System

Video Presentation

Summary of system

1. Radio contacts fitted to turbo timer
2. Radio transmitter used from remote location to break contacts
3. Machine shuts down
4. Main isolation switch must be cycled before restarting machine

Reducing risk to emergency personnel accessing equipment.

Benefits of system

- Allows rescue personnel to safely access equipment in emergency
- Potential for use on any earthmoving equipment
- Simple and easy to install
- Low cost

The background features a light beige color with two large, overlapping, rounded shapes in a slightly darker shade of beige. At the top left, there is a horizontal strip showing a landscape with a dark, rocky ridge, a grassy slope, and a blue sky with white clouds. The bottom of the slide is a dark grey band.

Discussion and questions

Reducing risk to emergency personnel accessing equipment.
