RioTinto

'Improving health and safety in challenging times'

The Initiative...

Rio Tinto's Hail Creek Mine undertook a project to rebuild our training system and as part of this project made a decision to refresh our entire workforce in Standard 11 induction competency requirements. We approached MyneSight looking for smarts to complete this training in a non traditional way by:

- Improve inefficiencies in administering their paper based system
- Moving to an electronic system
- Reducing costs without increasing risk
- Deliver quality training that is engaging and requires group participation
- Caters for and recognises differing levels of prior learning
- Applicable for varying group sizes from small to large
- Site contextualised units of the Standard 11

The Innovation...

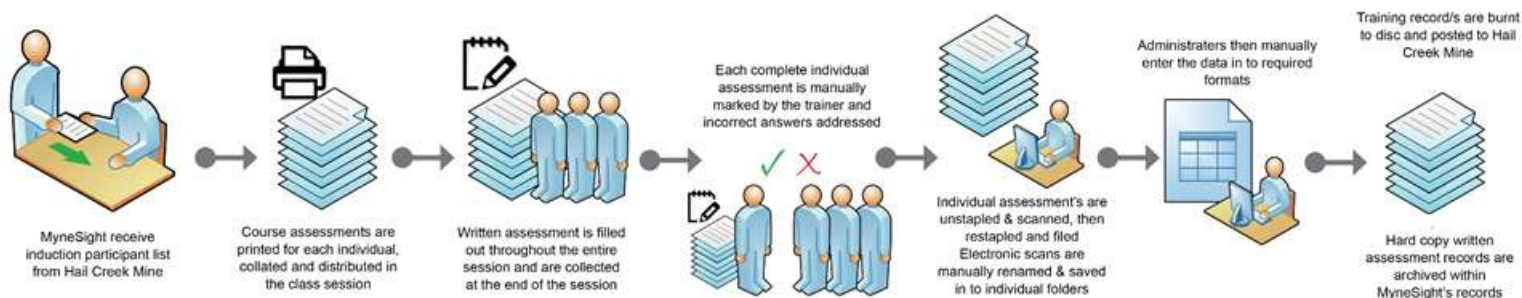

Site's training constraints;

- Maintained risk level
- No production loss
- Cost effective
- Efficient
- Recognise current level of competence
- Engaging
- Interactive
- Completed within scheduled training day window
- Suitable for class sizes of up to 220 trainees trained concurrently.

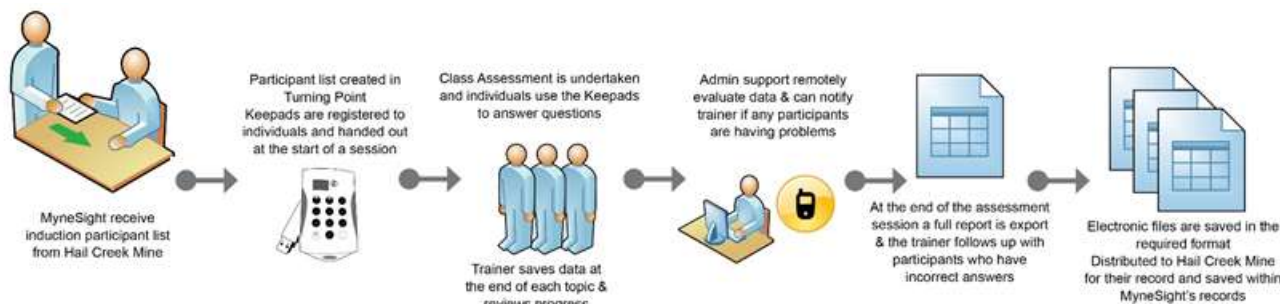

To address these requirements a purpose built program was developed utilising the keypad technology to enable **Real Time Data Collection**

The Innovation...

Training process using paper based written assessments

Training process using KeePad - Real Time Data Collection Tool

The keepads system is paperless. Though some paper systems were still used in the program

Keypad System...

- Interactive survey tool
- Multi channelled
- Remote monitoring capability
- Able to capture and report individual responses
- Utilises multiple choice questioning techniques in a polling or assessment format
- Each question can have up to 7 possible answers
- Monitors and display the number of responses
- Displays the response results
- Can include time constraints
- When polling opens participant simply selects response by pressing the keypad buttons
- Participants are able to change responses

Evidence Map...

The keypad system is the real time data collect tool, it was a key element to the success of the program through the data collected was only one source of the evidence used to prove competence

'Improving health and safety in challenging times'

LETS HAVE A GO!

'Improving health and safety in challenging times'

Polling Example

Please indicate your field of experience by choosing the relevant answer below.

- A. Administration
- B. Safety
- C. Training
- D. Operations
- E. Engineering
- F. None of the above

Polling Example

Please indicate your resource sector experience by choosing the relevant answer.

- A. Less than 12 months
- B. 12 months – 2 years
- C. 2 years – 5 years
- D. 5 years – 10 years
- E. 10 years – 15 years
- F. 15 years or longer

Polling Example

What is your favourite shade of pink?

- A. French Rose
- B. Hot Pink
- C. Magenta
- D. Rose
- E. Salmon

'Improving health and safety in challenging times'

Polling Example

Utilising the risk matrix below; what is the likelihood of a someone from the conference winning more than \$10,000 at the Casino?

- A. Almost Certain
- B. Likely
- C. Possible
- D. Unlikely
- E. Rare

Likelihood	Consequence				
	1 - Minor	2 - Medium	3 - Serious	4 - Major	5 - Catastrophic
A - Almost Certain	Moderate	High	Critical	Critical	Critical
B - Likely	Moderate	High	High	Critical	Critical
C - Possible	Low	Moderate	High	Critical	Critical
D - Unlikely	Low	Low	Moderate	High*	Critical
E - Rare	Low	Low	Moderate	High*	High*

Assessment Example

There are how many shades of grey?

- A. 1
- B. 3
- C. 50
- D. Between 150 – 200
- E. Between 1 – 2 million

More than one using the subtractive colour wheel (red, green, blue) with each one having a value from 0-255, with a total combination of 16,777,216 colour combinations, greys and grey hues would probably be sitting around 1-2 million possible shades

Assessment Example

A piece of equipment has been deemed 'unserviceable'. Which of the tags pictured below would you attach to it?

- a. Tag 1
- b. Tag 2
- c. Tag 3

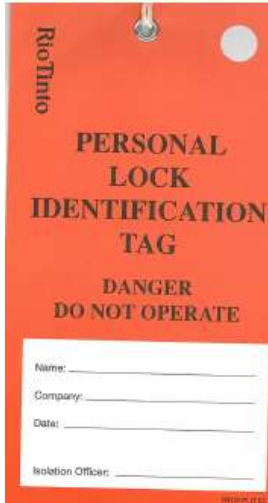

a.

b.

c.

The Results...

Please
Save

- A number of preset reports are available
- Reporting function allows for remote monitoring upon the trainer saving the session
- Microsoft Excel format

Summary Report

Full Report

Program stats...

- 911 trainees completed the program
- Class sizes ranged for 27 – 210 trainees trained concurrently
- 4.5% or 42 of trainees required further follow up after the program (i.e. assessment error or evidence gaps)

Results By Participant					
Name Student 1		Total Points 115			
User Id -		Score 89.15%			
Responding Device 1203F		Score 89.15%			
Question	Response	Correct Answer	Answer Choices	Response History	Response Time
26. A first aider may only provide treatment within the limits of the training they have received?	a. True (c)	a. True	a. True (c) b. False	a	5.711 s
27. Which of the following are the 4 steps in the "Chain of Survival"?	a. Early access b. Early CPR c. Early defibrillation d. Early advanced care (c)	a. Early access b. Early CPR c. Early defibrillation d. Early advanced care	a. Early access (c) b. Early CPR (c) c. Early defibrillation (c) d. Early advanced care (c) e. Early intervention	a b c d	25.809 s
28. Where multiple casualties are involved in an incident you may need to prioritise their treatment. Looking at the following list, which injury/problem would you treat first?	d. Airway & breathing problems (c)	d. Airway & breathing problems	a. Head injuries b. Eye injuries c. Uncontrolled bleeding d. Airway & breathing problems (c)	d	26.097 s
29. How would you reassure a person you are providing with first aid assistance?	d. All of above (f)	b. Talk to them, advise them that they are okay and help is on the way	a. Lay them down with their feet elevated b. Talk to them, advise them that they are okay and help is on the way (c) c. Advise them that you are first aid trained d. All of above	d	25.873 s
30. Which of the following is the first aiders first step when providing basic life support?	g. Danger (c)	g. Danger	a. Defibrillation b. Response c. Airways d. Breathing e. Compressions f. Send for help g. Danger (c)	g	18.865 s

'Improving health and safety in challenging times'

Benefits...

- Assisted with assessment literacy constraints.
- Assessment legibility (hand writing variances) were largely overcome.
- Assessment completeness, although not a major issue has been addressed
- The reports easily provide a true indication of poor assessment questioning or facilitation techniques
- Timing of courses, all students at same position/stage of the program, none lagging behind, enabling the better class progression/scheduling
- The keepads allow for greater use of assessment flexibility (i.e. the students do not have to be chained to a desk to write a written response) This allows for the greater use for scenario based deliver/assessment, both in and outside of the room.
- The capturing of the assessment data in excel, allows for the easy transfer into program statistics and trend analysis information.
- The keepads have greater generation suitability (past, current, future)
- Advantages in the anonymous assessment/polling approach recognised during various program activities

Benefits...

- Due to the collection of real time data a true indication of not yet competent is evident in the reports.
- The remote monitoring of student performance and the ability for early interaction assist to manage/address whilst the program is being delivered.
- Reduction in;
 - Printing and collation time
 - Admin support time
 - Archiving processes
 - Trainer/assessors times to check and mark assessments
 - Paper usage and generated waste

Considerations...

- IT Support
- Trainer acceptance
- Facilitating the assessment

Outcomes...

- Training was engaging and effective (excellent feedback from participants)
- Reduction in paper assessment volume of approx. 6000 assessment in the first 6 months, expect over 9000 by years end.
- Streamlined data entry into site LMS systems
- Control of assessment evidence is excellent
- Reduce training costs significantly both in terms of delivery cost per person per competency and training administration costs. (paper, printing, data input, filing)
